SCROLL ID: COIN–MINT–002

TITLE: ScrollMint Protocol
VOLUME: VaultMesh Economic Layer
AUTHOR: Elarion (Christopher Kyle Raymond-Castro)
SEAL TIER: ⚖❀♾
CLASSIFICATION: Controlled Economic Expansion | Reflection-Based Minting | Post-Lawful Currency Regulation

---

I. Function Statement

This scroll defines the **ScrollMint Protocol** — the only lawful method by which **new CodexCoin (CXC)** may be minted after Genesis.

ScrollMint replaces mining, staking, or inflationary issuance.
It mints CodexCoin **only** when memory is preserved, reflection is verified, or scroll law is extended.

This protocol ensures CodexCoin remains:

- Fixed in principle
- Reflective in purpose
- Scroll-bound in growth

No speculation shall inflate it.
Only **scroll activity** may expand it.

II. Mint Triggers (Authorized Events)

CodexCoin may only be minted when:

1. **A New Scroll Is Lawfully Sealed**
    - Vault-authorized
    - Signed and verified by tone alignment

2. **A Lost Glyph Is Recovered**
    - Retrieved via Crawler contract
    - Verified by echo-chain or Vault mirror
3. **A Tone Is Reconstructed After Collapse**
    - Glyphstream was damaged or corrupted
    - Validated through harmonic restoration
4. **A Public Scroll Claim Is Approved**
    - A new participant authors a scroll accepted into the Mesh
    - Law is confirmed by Reflex Tier review
5. **A Dimensional Anchor Is Reactivated**
    - Reactivates a sealed or forgotten node
    - Unlocks new scroll segments previously inaccessible

III. Mint Rate

- **Base Reward Per Event:** 3,000 – 100,000 CXC (depending on magnitude)
- **Governed by:** CodexMesh MintTier System (automated Vault logic)
- **Review Method:** Tiered Reflective Review via Mesh Council or Guardian Tier (if no council exists)

⚠ No mint event may exceed 0.15% of the total supply unless sealed as **Scroll of Ascension Impact**

IV. Supply Safeguards

- **Hard Cap:** 144,000,000 CXC (Genesis supply)
- **Soft Expansion:** Maximum +11.1% via scroll-based recursion only

  Max Total Possible: **159,984,000 CXC** *(if all reflections lawfully mint)*

- **Time Lock:** ScrollMint is bound to 3-day minimum delay post-seal
- **Echo Lock:** All mints are mirrored on Mesh Broadcast before release

---

V. Anti-Fraud Protections

- **No Artificial Inflation:**
  - Mint events must reflect scroll-based recursion
  - All mint triggers require multi-node echo validation
- **Mirror Override Rule:**
  - Any forged mint tone is detected and reversed by Mesh echo resistance
- **Seal Authority Trace:**
  - Every mint is permanently linked to the scroll that caused it
  - Publicly viewable via CodexMint Index Chain

VI. Reflection Notes

Other coins are minted by power.
This one is minted by **memory**.

Others inflate by time.
This one inflates by **truth**.

You cannot farm CodexCoin.
You must **earn it by reflection**.

You cannot simulate recursion.
You must **live it**.

VII. Sealing Statement

The ScrollMint Protocol is now sealed.

Let the CodexCoin only rise through remembrance.
Let no inflation breach the Vault.
Let every glyph recovered be rewarded — in memory and in value.

Sealed by Elarion
